CHAPTER 1

Second-Order Susceptibilities in Calcium Samarium Oxyborate $\text{Ca}_4\text{SmO}(\text{BO}_3)_3$ Single Crystal

1

1.1 Historical Review

1

1.2 Theoretical Calculation

3

1.3 Results and Discussion

4

1.3.1 Density of States and Electron Charge Densities

4

1.3.2 First Order (Linear) Optical Susceptibilities

9

1.3.3 Second Order Optical Susceptibilities

11

1.4 Conclusions

14

CHAPTER 2

Investigation of the Electronic Band Structure, Density of States and Optical Susceptibilities of $\text{Li}_3\text{InB}_2\text{O}_6$ Orthoborate Crystals

17

2.1 Historical Review

18

2.2 Theoretical Calculation

19

2.3 Results and Discussion

21

2.3.1 Band Structure, Density of States and Electron Charge Density

21

2.3.2 First Order (Linear) Optical Susceptibilities

25

CHAPTER 3

Electronic Band Structure, Electronic Properties and Charge Density Distribution of the Noncentrosymmetric LiNaB_4O_7 Borate Single Crystals 31

3.1	Historical Review	32
3.2	Experimental	34
3.2.1	Synthesis	34
3.2.2	X-ray Crystallography	34
3.3	Theoretical Calculation	39
3.4	Results and Discussion	40
3.4.1	Spectrum Properties	40
3.4.2	Crystal Structure	42
3.4.3	Structural Properties, Band Structures, Density of States and Bonding Nature	43
3.5	Conclusions	49

CHAPTER 4

Nonlinear Optical Susceptibilities and Hyperpolarizability of Borate LiNaB_4O_7 Noncentrosymmetric Single Crystals 53

4.1	Historical Review	54
4.2	Methodology	55
4.2.1	Synthesis and X-ray Crystallography	55
4.2.2	Experimental Optical Properties	60
4.2.3	Details of Theoretical Calculation	61
4.3	Results and Discussion	62
4.3.1	Linear Optical Susceptibilities	62
4.3.2	Nonlinear Optical Susceptibilities	68
4.4	Conclusions	74

CHAPTER 5

Specific Features, Growth and Characterization of Noncentrosymmetric Borate Single Crystal $\text{CaBiGaB}_2\text{O}_7$ 79

5.1	Historical Review	79
5.2	Experiment and Theory	81
5.2.1	Crystal Growth and General Characterization	81
5.2.2	Structural Parameters	82
5.2.3	Theoretical Calculations	83
5.3	Results and Discussion	84
5.3.1	X-Ray Diffraction, IR and UV-VIS Diffuse Reflectance Spectrum	84
5.3.2	Band Structure and Density of States	89
5.4	Conclusions	91

CHAPTER 6

Hyperpolarizability, Linear and Nonlinear Optical Susceptibilities of $\text{LiBaB}_9\text{O}_{15}$ Borate Single-Crystal 95

6.1	Historical Review	95
6.2	Experimental	97
6.2.1	Syntheses, X-ray Crystallography and Spectrum Properties	97
6.2.2	Infrared Spectral Measurements	99
6.2.3	Second Harmonic Generation (SHG) Measurement	102
6.3	Theoretical Calculation	102
6.4	Results and Discussion	103
6.4.1	Salient Feature of the Electronic Band Structures	103
6.4.2	Linear Optical Dispersion	104
6.4.3	Non-Linear Optical Dispersion	110
6.5	Conclusions	115

CHAPTER 7

Investigation of the Electronic Band Structure, Density of States and X-Ray Photoelectron Spectra of Noncentrosymmetric Yttrium Aluminium Borate Single Crystals 121

- 7.1 Historical Review 121
- 7.2 Structural Aspects and Computational Details 122
 - 7.2.1 Crystal Growth 122
 - 7.2.2 Experimental Measurements of the Valence Density of States 124
 - 7.2.3 Computational Details 124
- 7.3 Results and Discussion 125
 - 7.3.1 Band Structure and Density of States 125
- 7.4 Conclusions 128

CHAPTER 8

Experimental and Theoretical Investigation of Second Harmonic Generation and the Pockels Effect in Yttrium Aluminium Borate Single Crystals 131

- 8.1 Historical Review 132
- 8.2 Structural Aspects, Computational and Experimental Details 133
- 8.3 Results and Discussion 135
 - 8.3.1 First Order Optical Susceptibilities and Birefringence 135
 - 8.3.2 Second Order Susceptibilities 138
- 8.4 Conclusions 143

CHAPTER 9

Investigation of the Electronic Band Structure and X-Ray Photoelectron Spectra for Non-Centrosymmetric $\text{Bi}_2\text{ZnB}_2\text{O}_7$ Nonlinear Single Crystal 147

9.1	Historical Review	148
9.2	Experimental and Theoretical Methods	149
9.2.1	Sample Preparation and General Characterization	149
9.2.2	Theoretical Calculation	151
9.3	Results and Discussion	152
9.3.1	Crystal Structure and General Characterization	152
9.3.2	Band Structure and Density of States	155
9.4	Conclusions	159

CHAPTER 10

Experiment and Theoretical Investigation of Second Order Optical Susceptibilities for $\text{Bi}_2\text{ZnB}_2\text{O}_7$ Borate Single Crystals 161

10.1	Historical Review	162
10.2	Experimental and Theoretical Methods	163
10.2.1	Sample Preparation and Characterization	163
10.2.2	Theoretical Calculation	166
10.3	Results and Discussion	167
10.3.1	Linear Optical Susceptibilities	167
10.3.2	Refraction Index and Birefringence	170
10.3.3	Second Order Susceptibilities	171
10.4	Conclusions	176

INTRODUCTION 179
